

## **Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application.

### **Listing of the Claims:**

1. (currently amended) A skin care or cleansing packaged product, comprising:
  - a. a container having a first chamber and a second chamber, each chamber having an outlet;
  - b. a composition contained in the first chamber having a dispersed phase including a first and a second component, the first component being capable of chemically reacting with a the second component ~~contained in the second chamber~~ that is different from the first;
  - c. a continuous phase present in the composition composed of a substantially anhydrous carrier contained in the first chamber;
  - d. an organophilic particle stabilizer contained in the dispersed phase; ~~and~~
  - e. water contained in the second chamber;
  - f. wherein the first component is substantially unsolvated in the carrier; and
  - g. wherein the first and second components do not substantially react with water or each other until dispersed or dissolved in water during cleansing and skin treatment by a consumer.
2. (previously presented) The packaged product of claim 1 wherein the outlet of the first chamber and the outlet of the second chamber fluidly communicate with each other to allow mixing of the contents of the first and second chamber prior to deposition on the skin or hair of a user.
3. (previously presented) The packaged product of claim 1 wherein the outlet of the second chamber do not fluidly communicate with each other whereby the mixing of the contents of the first and second chamber occurs after deposition of the contents of the first and second chamber on the skin or hair of a user.

4. (currently amended) The packaged product of claim 2 wherein the dispersed phase in the first chamber has less than 25 % by wt. of the second component and ~~the dispersed phase in the second chamber has~~ less than 25% by wt. of the first component.
5. (original) The packaged product of claim 1 wherein a cup is releasably attached to the container and positioned for receiving the contents of the first chamber.
6. (currently amended) The packaged product of claim 5 wherein the cup is marked with a fill line for introducing a measured amount of the ~~second component~~ contents of the second chamber.
7. (cancel)
8. (original) The packaged product of claim 5 wherein the cup is positioned for receiving the contents of the second chamber.
9. (original) The packaged product of claim 1 further comprising a unit dose pump.
10. (original) The packaged product of claim 1 wherein the outlet of the first chamber contains a one way valve.
11. (original) The packaged product of claim 10 wherein the valve is selected from a duckbill valve, a ball valve or a slit valve.
12. (original) The packaged product of claim 1 wherein the at least one reactive component has a particle size range of about 0.1 to 5000  $\mu$ .
13. (cancel)
14. (previously presented) The packaged product of claim 1 wherein the organophilic particle is in the particle size range of about 0.02 to 250  $\mu$ .
15. (previously presented) The packaged product of claim 1 wherein the stabilizer is selected from organophilic silica, organophilic clay, or blends thereof.

16. (cancel)

17. (cancel)

18. (original) The packaged product of claim 1 wherein the first component is capable of producing a gas in aqueous solution when reacted with an acid and the second component forms an acid in the presence of water.

19. (withdrawn) The packaged product of claim 1 wherein the first component is capable of generating sulfide ions when reacted with an alkaline material and water.

20. (withdrawn) The packaged product of claim 1 wherein the first component is capable of generating a peroxide compound when dissolved in water.
